ee24btech11064 - Harshil Rathan

- 1) $\lim_{x\to 2} \frac{3^x + \frac{27}{3^x} 12}{\frac{1}{3^x} \frac{3}{3^x}}$ is equal to.
- 2) If variance of first n natural numbers is 10 and variance of first m even natural numbers is 16, m + n is equal to
- 3) If the sum of the coefficients of all even powers of *x* in the product

$$(1 + x + x^2 + x^3 + x^2 + x^2) (1 - x + x^2 - x^3 + x^2)$$

is 61, then n is equal to

4) Let S be the set of points where the function, $f(x) = |2 - |x - 3||, x \in R$, is not differentiable. Then, the value of $\sum x \in S f(f(x))$ is equal to

Fig. 4.

5) Let A(1,0), B(6,2), $C(\frac{3}{2},6)$ be the vertices of a triangle ABC. If P is a point inside the triangle ABC such that the triangle APC, APB and BPC have equal areas, then the length of the line segment PQ, where Q is the point $\left(\frac{-7}{6}, \frac{-1}{3}\right)$, is
